Installation and usage instructions

Thank you for choosing an EQUIPMENTGUARD AC HVAC equipment base pad. We've provided the following guidelines to ensure proper installation and maintenance. When installed and maintained properly, you can expect years of worry-free usage.

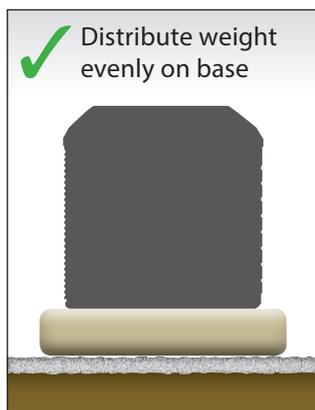

Step 1: Prepare the surface

Choose a solid, compacted, level surface such as crushed gravel or well-drained soil. Remove any large or sharp rocks or other objects. Do not place the base over a pit or hole.

Step 2: Place the base

Place the base on the prepared surface in the desired orientation.

Step 3: Set equipment on base

Before placing the equipment, double-check that your base is level.

Usage guidelines

1. Never modify product by cutting, drilling or otherwise penetrating the surface. This would expose the core, leaving it vulnerable to chemical attack or UV degradation.
2. Be sure that any equipment placed on the base has no sharp points or protrusions that could puncture the product or its coating.
3. Chemical resistance: does not crack, fade or warp when tested with R-22 and R-1341, synthetic canine urine, compressor oil, or a 20% salt solution.
4. Do not exceed the weight load capacity (see chart on back). User is responsible to ensure the weight load is not exceeded at any surface point.
5. Maximum long-term temperature exposure should not exceed 165°F (74°C).

Weight load limits

The maximum load will be different for each size pad. The following are the maximum recommended load evenly distributed on the pad.

| Pad size | Maximum load |
|-----------|--------------|
| 30" x 30" | 4,500 lbs |
| 33" x 33" | 5,400 lbs |
| 36" x 36" | 6,480 lbs |
| 48" x 48" | 11,520 lbs |

In the event that the coating is damaged, in many cases repairs can be made using a repair kit available online from ASSETGUARD through carbodirect.com.
